

An aerial photograph of a coastal resort. In the foreground, a large, modern building with a blue roof and white walls is surrounded by lush green trees. A swimming pool is visible near the building. To the left, there is a parking lot filled with cars. The middle ground features a wide, sandy beach that curves along the shoreline. The ocean is a vibrant blue, with several rocky islets and reefs visible in the water. The sky is a clear, bright blue with a few scattered white clouds.

QualitySoft

Company Profile

Quality work brings quality to life.

Growing into a company that contributes to creating a prosperous world.

QualitySoft Corporation
CEO Kiyoharu Ura

Our Vision

Since founding QualitySoft Corporation, we have always taken on new challenges. As a pioneer of IT asset management software vendors, we began providing "QND Plus" in 1998, and, anticipating the cloud era, we began providing a cloud-based IT asset management service "ISM CloudOne" in 2007. By realizing a safe work environment without compromising user convenience, we have supported our customers not only in Japan but also overseas.

As technology evolved, we have created an environment where people can work anywhere, anytime without being constrained by their workplace and working hours. The number of companies promoting telecommute is increasing, and people's work style is changing. QualitySoft will further improve cloud services with the security technologies we have cultivated so far and empower the way we work.

Also, in order to continue bringing new value in a rapidly changing social environment, it is necessary to innovate new services by interacting with people with various ideas. To offer a place and to put those ideas together, QualitySoft provides INNOVATION SPRINGS, a "fountain full of innovation".

With INNOVATION SPRINGS at its core, we will continue to strive for useful products for our customers and contribute to creating a prosperous world.

Quality work brings quality to life.

We believe good quality work will enrich our lives both physically and mentally. We named our company "QualitySoft" in the hope to work based on the thought and with people who share the same idea.

Think Global Act Local.

We want to enrich our local area. We believe that contributions towards local areas will accumulate and eventually enrich the whole country, which leads to creating a prosperous world.

Contribution and Growth

By contributing to goals of various tasks, QualitySoft members grow as professionals, as business persons, as world citizens and as human beings. The joy of contribution and growth enriches our company and its members.

Our Mission

Make "Quality Style" the Ideal Way to Work

Let's get together and do something fun!
Let's do something big and make people happy!

Enrich the World with INNOVATION SPRINGS

We use **INNOVATION SPRINGS** as a driving force to create innovations that surprise, delight, and enrich the world.

INNOVATION SPRINGS

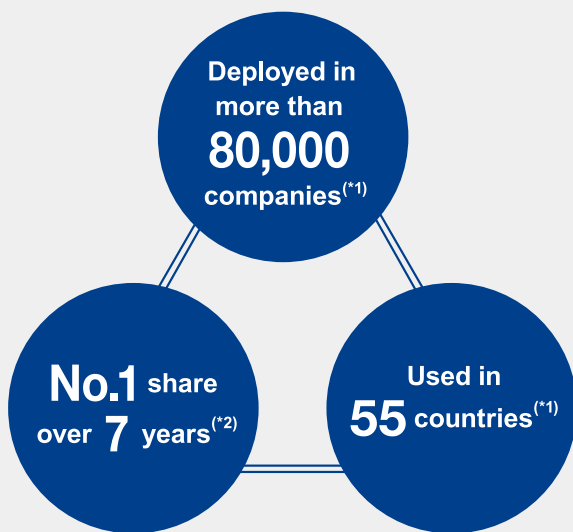

Japan, where we live, is a wonderful country where water, the Sun and four seasons nurture the nature. The splendor remains in the rural areas, not in the fully developed cities. We Japanese, blessed with the richest nature in the world, should enjoy living in rural areas, gain new ideas in the generous environment, and show the world what "richness" truly means, both mentally and materially.

QualitySoft's headquarters is based in Shirahama, a rural area located in Wakayama, and has succeeded in creating employment of a certain scale, but in order to create more employment in this region, industries and people involved in this area need to further cooperate with each other. To do so, it requires a place where people and industries can freely gather and interact. We have prepared a place, "INNOVATION SPRINGS", where new ideas can be born by gathering up people. "INNOVATION SPRINGS" is a coined word, meaning "innovation gushes up like hot springs of Shirahama".

Arising in Shirahama, INNOVATION SPRINGS has spread to Matsumoto, Nagano, which has one of the bases of QualitySoft, to spread another spring. INNOVATION SPRINGS creates more employment in its local region, and with all of our employees together, the power of people strengthens QualitySoft itself. With INNOVATION SPRINGS, we interact with many people, create innovation, and enrich the world.

Product Transition

Since the release of the license management software, KeyServer, in 1993, we have been aiming to be a software company that can provide services that truly satisfy our customers.

QND Plus, released in 1998, is the first in-house developed product that distributed KeyServer and had an IT asset management feature. The pioneering QND Plus of the IT asset management software has been leading the market with a total of more than 4.4 million clients deployed in major companies.

The number of incidents of personal information leakage has increased since 2000, and the demand for leakage prevention has increased due to the enforcement of the data protection law in 2003. In addition, the prevalence of malware, such as viruses, worms, spyware, and backdoors, has increased the demand for endpoint security through a multi-layered defense. Responding to those demands, we first released QND Advance, in which more security features were added to the previously-released QND series, evolving to be an endpoint security tool, not just an IT asset management tool. In 2007, anticipating the expansion of the cloud market, we released the cloud-based endpoint security service, "ISM CloudOne".

ISM CloudOne, which can protect the endpoint devices regardless of whether you access the network from the office, on the go, or from home, is expanding not only domestically but also globally, and is used in 55 countries^(*) overseas.

"Empower" the Way We Work

Our products have evolved from an IT asset management tool to information leakage countermeasures and an endpoint security tool. Until the recent years, we have focused on the software development that helps network system personnel to manage the company-owned devices and infrastructure, but the way people work has become more and more diversified lately due to the change in social background.

Because of the declining birthrate and aging population, it is important to create an environment where people can work and communicate no matter where they are to secure and maintain the workforce. We will change the direction of product development to maximize the benefits of the cloud platform and accelerate the provision of software that supports the lifestyle of workers while ensuring information security.

From now on, while maintaining the original features of former products, we will develop products that improve the convenience and productivity of people who use the endpoint devices.

ANNOUNCER DRONE For Emergency Support

With announcer drone...

On behalf of the rescue crew, you can make announcements to people at emergency sites from the sky. You can also deliver clear audio to places difficult to convey messages from the ground.

Made In Japan

A "made in Japan" drone that withstands strong rain and wind. Our technical support includes machine maintenance.

Piezoelectric Speaker

Equipped with a piezoelectric speaker whose audio output withstands the propeller noise of the drone itself or noisy environments.

29 Languages

Enter an announcement in Japanese, and machine-translate it into ones selected from 29 languages.

* The announcer drone was developed with an idea emerged in INNOVATION SPRINGS.

Education

Drone programming

Develop programming thinking and effectively utilize technology for finding/solving problems, as programming education becoming compulsory in elementary schools.

Learn
Python

Logical thinking

Problem solving

Teamwork

Creativity

ICT materials that give an opportunity for students to think independently

Program to fly a drone by trial and error and improve logical thinking and problem-solving skills. You can also learn Python from scratch with the ICT materials.

We engage in social activities aimed at creating and providing value that is possible only with QualitySoft.

PC/Network (PCNW) Meeting

A workshop for network system personnel to gather information, to discuss about issues on their in-house system management, and to educate human resources in the IT department.

PCNW Meeting

A keynote lecture and a panel discussion with guest speakers and the PCNW board members about the IT trends.

It is the network system personnel who supports PCNW. The biggest feature of PCNW is that each event is composed of their viewpoints!

Client Management

Share the challenges you face in the daily operations and seek hints and effective solutions.

Learn IT Trend

Discuss the latest IT-related keywords, based on case studies.

たまな商店 Tamana Shop

Food sustainability - Revitalize Japan -

To support primary sector of local economy, we opened "Tamana Shop", which offers organic food that is not only delicious but also friendly to people and the environment, and operate "Tamana Class", which is a learning place about food and the health. Our products are available at Tamana Shop, on our website, on Amazon, on Rakuten Ichiba, and as the hometown tax refund items of Shirahama.

Visit Tamana Shop website

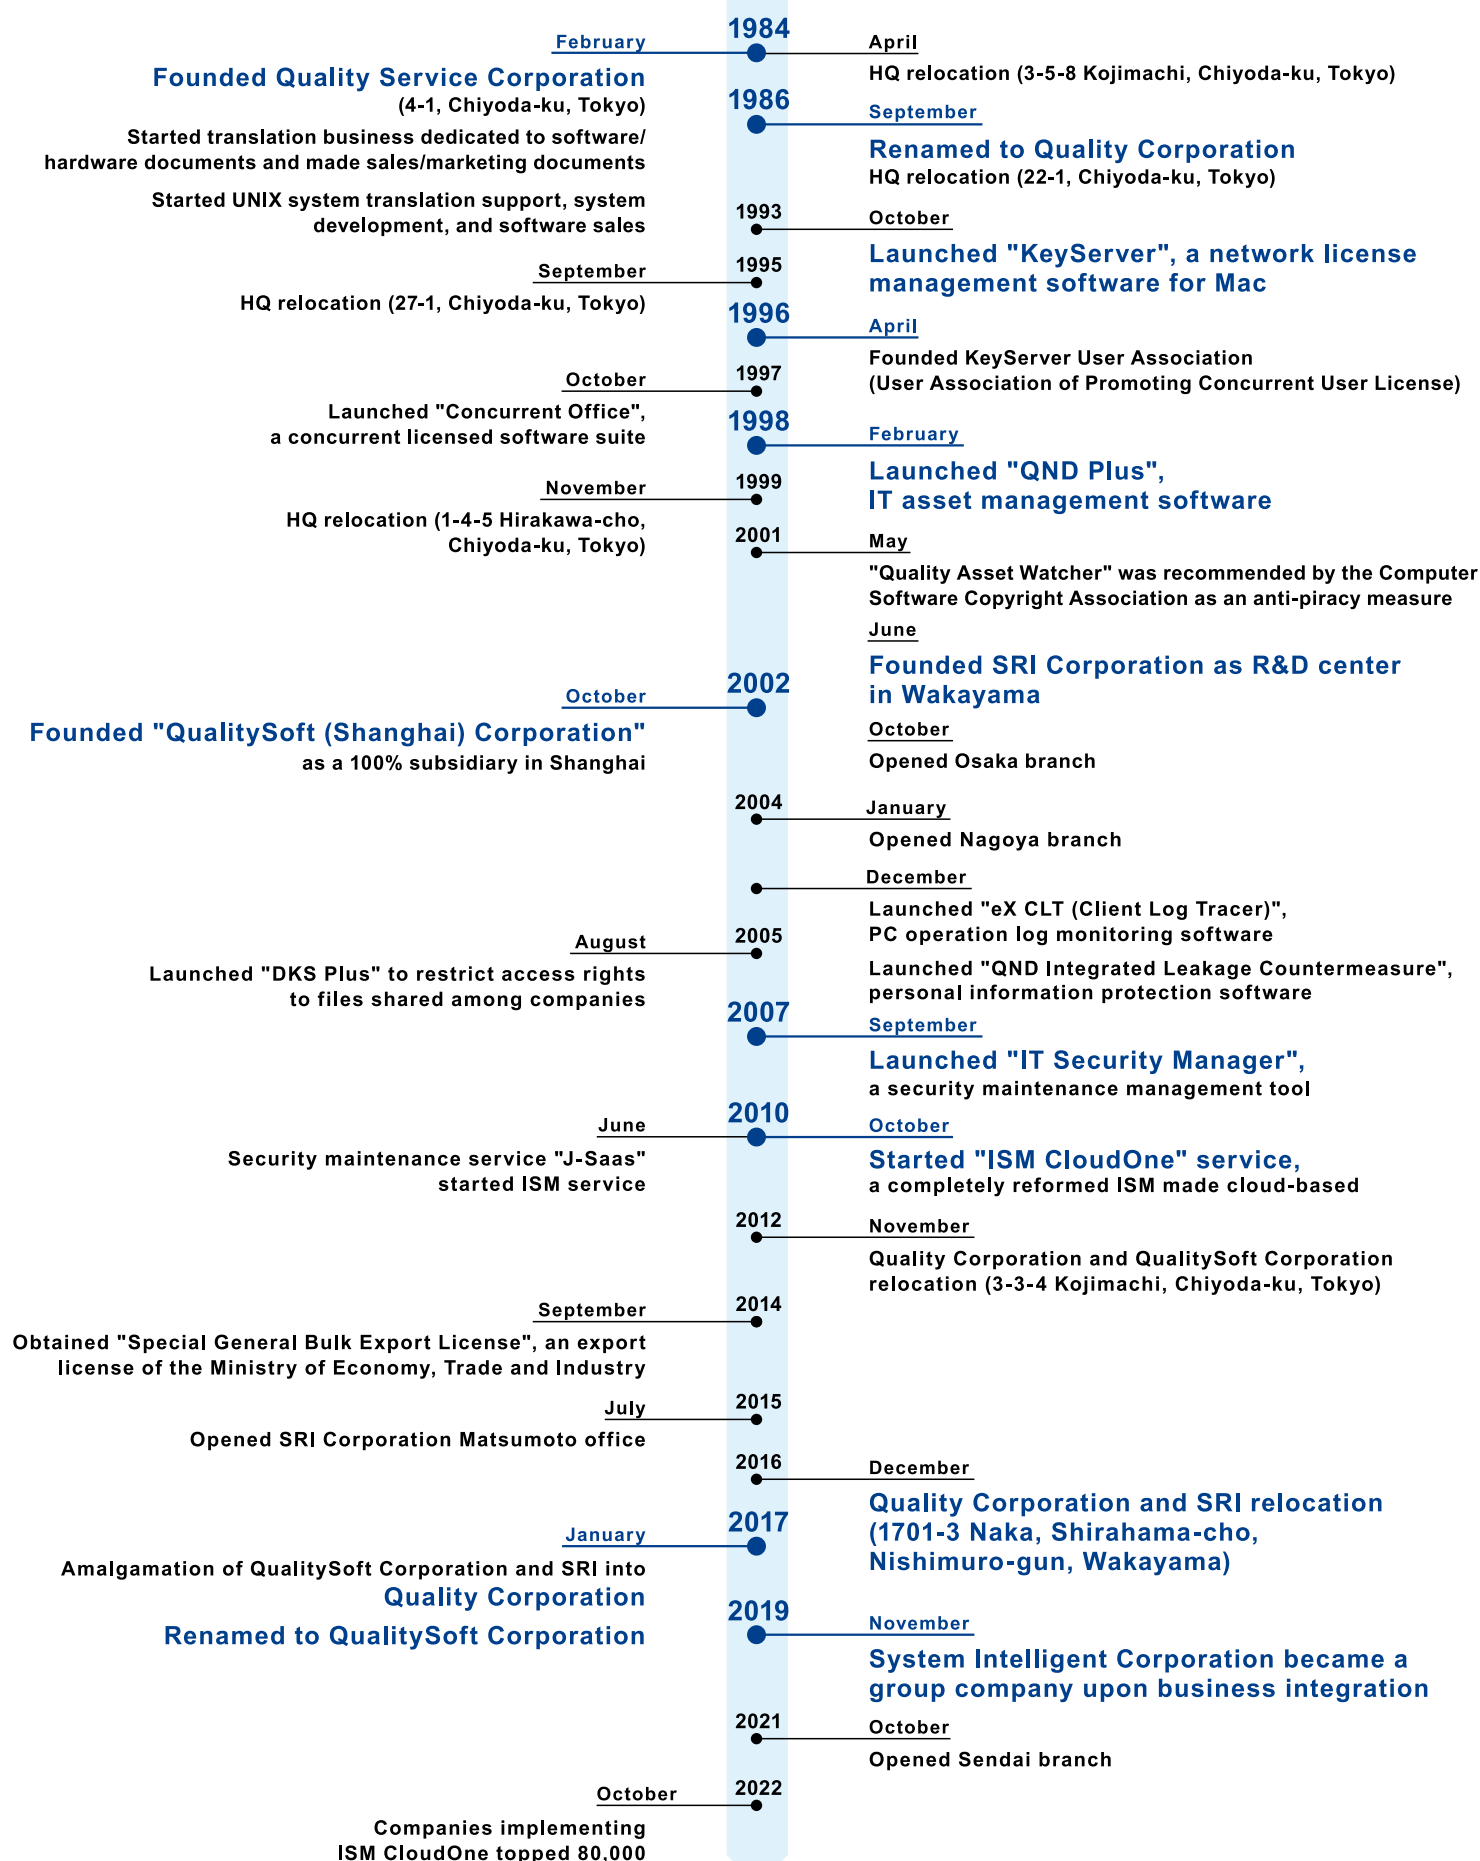

Employee cafeteria "Quali-Tei"

Disseminating information through the employee cafeteria

We opened an employee cafeteria "Quali-Tei" to serve dishes cooked with local vegetables and rice. Though it is mainly for our employees, we open it for public use too to spread proper dietary education to the local community. "Quali-Tei" serves to contribute to good health of people around us through sustainable food.
